SUMMARY

Full-stack developer with **4+ years** of experience building production web applications, mainly with **React** and **TypeScript**, and backend experience in **Go** and **Node.js**. Uses **AI-assisted tools** in daily development and has worked remotely with teams in **Taiwan**, the **United States**, and **Indonesia**.

WORK EXPERIENCE

Software Developer (Contract) | Taiwan Mobile — *Taiwan (Remote)* Mar 2026 - Present

- Contributed to the modernization of an internal application portal, replacing legacy **JSP**-based screens with **React**, **TypeScript**, and **Tailwind CSS** and implementing backend features using **Spring Boot** and **MyBatis**.
- Developed backend features for an internal operational data app using **Spring Boot** and **MyBatis**.
- Implemented background-job hooks triggered when users register or log in to connected internal apps, using **Spring Boot** and **Quartz**.
- Developed settings functionality for an internal project management system using **Spring Boot** and **MyBatis**.
- Built a **.NET** CLI tool to migrate the database of a FreePBX management dashboard from **Microsoft SQL Server** to **PostgreSQL**, handling schema and data migration, data-type differences, relationships, and validation.
- Used AI-assisted development (**GitHub Copilot**, **Claude Code**) across all projects, from coding to debugging.

Full-stack Developer (Freelance) | Darter.ai — *United States (Remote)* Jun 2025 - Dec 2025

- Developed driver app features in **React Native**, supporting the driver workflow from receiving an assigned trip through passenger drop-off, plus driver document management.
- Introduced internationalization (i18n) in the **React Native** driver app to support additional languages.
- Initialized two **Go** services using **Echo**: a documentation management service used by the driver app and dashboard, and a service providing new dashboard APIs.

Full-stack Developer (Contract) | bythen.ai — *Indonesia (Remote)* Mar 2025 - May 2025

- Built an LLM chat playground prototype platform using **TypeScript**, **NestJS**, and **MySQL** that the project manager used to evaluate whether to add the feature to the product.
- Integrated **OpenAI** and **Grok** APIs into an LLM playground for building product-specific **RAG** workflows.

Frontend Developer | eFishery — *Indonesia (Remote)* Jul 2022 - Feb 2025

- Maintained and extended an internal harvest dashboard using **React**, **TypeScript**, and **Ant Design**, supporting harvest recording and data flows to fulfillment and supplier processes.
- Built an internal logistics dashboard using **React**, **TypeScript**, and **Ant Design**, covering orders, delivery orders, fleet management, fleet company contracts, and payment disbursement.
- Updated the ordering workflow in eFisheryku, a **React Native** app, for field staff placing orders on behalf of customers.
- Developed features for a progressive web application (PWA) supporting quality control of fish harvests.
- Fixed excessive re-rendering in dynamic rate-card forms with 500-1,000 rows by switching to per-row editing.
- Introduced unit and component tests for the logistics dashboard using **Vitest** and **React Testing Library**, drawing on QA test cases; reached approximately 85% line coverage reported by **SonarQube**.

Full-stack Developer (Contract) | Celerates — *Indonesia (Remote)* Apr 2022 - Jun 2022

- Built internal applications for inspector records, task assignments, and master data using **Next.js**, **TypeScript**, **Tailwind CSS**, **Hono**, and **PostgreSQL**.
- Designed REST APIs and documented API contracts and database entity relationships in RFCs.
- Set up **GitHub Actions** CI/CD workflows and managed deployments using **Docker** and **Caddy** on a VPS.

PROJECTS

Tsuzuru — tsuzuru.fahrezy.work *Nuxt, Vue, TypeScript, Bun*

- Japanese writing-practice **PWA** with JLPT-level prompts, answer checking, and an offline journal.

GenkouYoushi — genkouyoushi.fahrezy.work *SolidJS, TypeScript*

- Japanese manuscript-paper practice app as a **PWA**, backed by a self-built Kanji API that generates stroke-order diagrams.

SKILLS

Frontend: React, Next.js, Vue.js, Nuxt, SolidJS, React Native, TypeScript, Tailwind CSS, Ant Design, TanStack Query
Testing: Vitest, Jest, React Testing Library, SonarQube
Backend & tools: Node.js, NestJS, Go, PostgreSQL, MySQL, REST APIs, Git, GitHub Actions, Docker
Languages: Bahasa Indonesia (Native), English (Intermediate)

EDUCATION

Associate's Degree in Application Software Engineering Aug 2019 - Sep 2022
Telkom University
